The system of shaft enumeration primarily offers advantages for sewer operation. The respective staff in charge of maintenance, inspection or repair only has to read the shaft numbers correctly and enter them in a work report. This helps to completely avoid the common problems of confusion on shaft locations on site due to confusion of reading errors in as built drawings. Engineers, contractors, and citizens may also take advantage of the permanently fixed, readily accessible and legible numbers in the shaft.

## Product code: BKS250PE4

Basic material: 4mm polyethylene

Size: 200 x 50mm

The numbers are in full depth into the PE plate to guarantee permanent legibility. Upon request, Bodemann supplies the numbers separately to be mounted by the respective operating staff.
